## SUMMARY

Software engineer with 8+ years of experience shipping design systems, banking apps, auction platforms, AI agents, and healthcare software for enterprise clients. Currently building healthcare solutions at Jaya Tech for FamilyWell Health, a US based startup focused on mental healthcare for women. Previously built LLM-powered products and AI agents at Caylent on AWS. Co-founded Konkreta, Brazil's main concrete ordering platform, and founded Engenharia Livre, an engineering blog with 40k+ followers.

## EXPERIENCE

|                                                                                                                                                 |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Software Engineer · Jaya Tech</b>                                                                                                            | Apr 2025 – Present  |
| Full-stack development of a HIPAA-compliant registry platform for FamilyWell Health, a US based startup focused on mental healthcare for women. |                     |
| <b>Software Engineer · Caylent</b>                                                                                                              | Sep 2024 – Apr 2025 |
| Built AI-powered products on AWS, including internal LLM chat tools and AI agents for business automation.                                      |                     |
| <b>Software Engineer · Trela</b>                                                                                                                | Nov 2021 – Jul 2024 |
| Full-stack development on a Next.js platform, building design systems, BFFs, microservices, and data infrastructure.                            |                     |
| <b>Software Engineer · DBServer</b>                                                                                                             | Oct 2020 – Oct 2021 |
| Migrated a banking application from Angular to React and built supporting design systems and backend services.                                  |                     |
| <b>Training Instructor · Gama Academy</b>                                                                                                       | Jan 2021 – Feb 2021 |
| <b>Software Engineer · Avanade</b>                                                                                                              | Jul 2019 – Oct 2020 |
| <b>Software Engineer · VOLLUP.COM</b>                                                                                                           | Feb 2019 – Jun 2019 |
| <b>Co-Founder · Konkreta</b>                                                                                                                    | Jul 2018 – Apr 2019 |
| <b>Technical Director · Constrinew Engenharia</b>                                                                                               | Jun 2017 – Apr 2019 |
| <b>Intern · Pöryr Tecnologia</b>                                                                                                                | Mar 2015 – Jun 2016 |
| <b>Developer · Blog da Engenharia</b>                                                                                                           | Aug 2014 – Jan 2015 |
| <b>Bilingual Technical Support Specialist · TeleTech</b>                                                                                        | Apr 2012 – Feb 2015 |
| <b>Backoffice · TeleTech</b>                                                                                                                    | Jan 2009 – Aug 2012 |

## SKILLS

**Frontend:** CSS Modules, Design Systems, Next.js, React, Storybook, Styled Components, Tailwind CSS, and TypeScript.

**Backend:** Cloudflare Workers, Express, FastAPI, Fastify, GraphQL, Nest.js, Node.js, and Python.

**AI / LLM:** Amazon Bedrock, CrewAI, DeepEval, LLM Integration, and RAG.

**Cloud & Infrastructure:** AWS, Cloudflare, Docker, Fly.io, GitHub Actions, Hetzner, and Terraform.

**Testing:** Cypress, Jest, Playwright, TDD, and Vitest.

**Data:** Metabase, MongoDB, Postgres, RabbitMQ, Redis, and Snowflake.

**Languages:** Portuguese (Native speaker) and English (Professional).

## EDUCATION
